

The EvoLucia™ Fairview Collection

- Saves up to 60% of current energy costs
- Maintenance-free for 11+ Years
- Dark Sky-compliant
- Environmentally friendly
- No light trespass
- Highest target efficiencies available

The EvoLucia Fairview Collection – Better Decorative Lighting at Lower Cost

The Fairview Collection of decorative roadway and walkway direct LED lights provides better nighttime visibility, uses less energy, lasts longer, requires less maintenance, and has less environmental impact than conventional lights. That may sound too good to be true. But it is true!

That's why the town of Fairview, Texas chose EvoLucia LEDs to light a major parkway, pathways and a fire house. Of course, the town was looking to save money – a projected savings in energy and maintenance costs of more than \$3 million over the life of the fixtures. But more importantly, they wanted to ensure maximum safety for everyone who uses the roads and walkways – and EvoLucia lights use proprietary photometric design technology to provide better lighting. Fairview Collection fixtures project light directly through precisely aimed and focused lenses to the area being lit, minimizing optical losses, reducing light spillage, increasing uniformity and heightening efficiency. And all of these features make the Fairview luminaires compliant with LEED light pollution reduction standards, which require that luminaires reduce sky glow, glare and light trespass.

EvoLucia
Next Generation LED Lighting

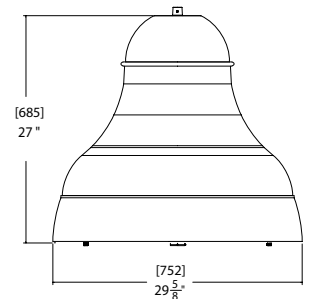

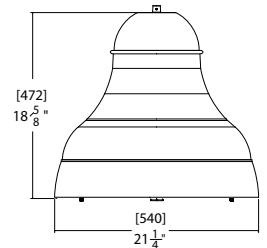

Features and Benefits:

- Energy Savings:**
 Walkway Lighting — 48 watts versus 120 watts power consumption

 Roadway Lighting — 225 watts versus 450 watts power consumption
- Maintenance Cost Savings:**
 Maintenance-free for 11+ years
- Lighting Performance:**
 Exceeds IESNA RP-8 recommended criteria for light levels, uniformity and glare

For highly efficient, cost-effective, low-maintenance quality illumination, EvoLucia roadway and walkway lights are your best choice.

LEDs, the enabling components of EvoLucia solid-state lighting products, are semiconductors that produce white light more efficiently than most traditional light sources. While the white light and high color rendition of LEDs has made them a good alternative to HID, CFL and incandescent lamps for certain applications, LEDs previously lacked the lumen output and optical control required for general illumination. Recent advances in LED efficiency – and EvoLucia’s proprietary technology – have changed that, making LEDs an increasingly obvious choice for environmentally friendly, cost-effective, low-maintenance lighting.
